DUE
Form and function in a duet

DUE is the ideal power strip for the kitchen. It guarantees an elegant power connection and can be used just as effectively in the office as in other areas. With its interchangeable covers, it can be colour-coordinated to its surroundings or create accents as desired, even after installation.

The split cover allows DUE to be slid open as required, with a design that looks equally elegant when in use. The low installation depth of approximately 45 mm allows it to be compactly integrated into kitchen worktops or the wall or installed above drawers.

The benefits at a glance

· Interchangeable covers available in black, white and stainless steel look
· Low installation depth (approx. 45 mm)
· Space-saving even when open
· Supplied with mounting template
· Integrated water run-off

DUE power strips
